

Proposal & Pricing Options

Castellan Manufacturing · Plant floor visibility across four plants

Executive summary

Castellan's four plants run on a mix of MES data, paper travelers, and a nightly Excel roll-up, so the operations team sees yesterday's scrap and downtime, not today's. Unplanned downtime cost an estimated \$2.1M last year, and on-time delivery slipped to 88% against a 95% commitment to tier-one OEM customers.

What we'll deliver

- Connect MES and ERP data from all four plants into one live operations view
- Shift-level alerts on scrap and downtime thresholds, routed to the line supervisor
- Standard OTD and OEE dashboards that replace the nightly Excel roll-up
- Phased rollout with two plants live in 8 weeks on a fixed-fee implementation

Expected impact

Outcome	Target	Annual value
Unplanned downtime reduction	20%	\$420,000
Nightly Excel roll-up eliminated	30 analyst hours/week	\$85,800
OEM late-delivery penalties avoided	OTD back to 95%	\$150,000
Total annual value		\$655,800

Pricing options

	Option A: all four plants	Option B: phased
Year 1 subscription	\$148,500 (4 plants)	\$96,000 (Dayton, Toledo)
Year 2 subscription	\$148,500	\$148,500 (all four plants)
Implementation (fixed fee)	\$24,000	\$16,000 in year 1, \$8,000 in year 2
Three-year total	\$469,500	\$417,000
Payback	3.2 months	2.9 months

Pricing assumes a three-year term, annual billing in advance, net 30, and a 5% cap on renewal increases. Valid for 30 days.

Why Ridgeline

- Native Rockwell MES and Epicor ERP connectors (no custom build, unlike the stalled in-house project)
- Two plants live in eight weeks on a fixed-fee implementation
- References available from two discrete manufacturers of similar size
