

Regional 3PL cuts carrier chargebacks 34% in its first peak

A nine-site third-party logistics provider in the Southeast

34%

fewer carrier chargebacks, peak over peak

22 min

average time to resolve a dock exception

7 weeks

from kickoff to all nine sites live

The challenge

The company ran nine sites on two WMS platforms. Exceptions (late trailers, short picks, missed carrier cutoffs) were reported in a spreadsheet that a network analyst rebuilt every morning. By the time a site leader saw a problem, the truck had already left or the chargeback was already on its way.

The approach

- Connected both WMS platforms and the TMS in the first two weeks, with no custom integration work from IT
- Configured exception rules for carrier cutoffs, short picks, and dock congestion, each routed to the owning site lead
- Captured how the three most experienced site leads resolved common exceptions and turned it into playbooks
- Replaced the morning network report with a live dashboard for the COO's daily stand-up

The results

Metric	Before	After first peak
Carrier chargebacks	\$286K	\$189K
Avg. exception resolution time	3.1 hours	22 minutes
Morning report prep	2 hours/day	Eliminated
On-time outbound	91.4%	96.8%

"We used to learn about a missed cutoff from the carrier invoice. Now the site lead gets it ninety minutes out with the fix already suggested."

VP of Operations
